Dilemma

What is your biggest dilemma(s) related to challenges you face every day working with children with disabilities?

Use the framework below to come to an evidence-based practice decision about using the resources from this workshop to help with your dilemma.

Is there a particular child who would be challenging to serve in your program or classroom now because of his / her developmental or educational needs? Integrate the evidence with your unique context and dilemma, and create an action plan using the following guiding questions:

- a. Identify the rights and responsibilities of children, families, and teachers according to the laws and policies related to this dilemma.

- b. Identify possible research-based teaching or intervening practices that you might implement to promote this child's developing and learning and support families.

- c. Identify community partners (e.g., early childhood specialists, TA practitioners, advocates) that might help you with this dilemma.

- d. What additional information and support do you need in order to implement this plan?

- e. How will you carry out this plan? What do you need to do next to implement this plan?
